EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David L. Schaeffer (Reg. No. 32,716) on 06/03/2011.

The application has been amended as follows:

Claim 8, REPLACE "as claimed in claim 2," WITH "as claimed in claim 1,".

Claim 15, REPLACE "as claimed in claim 2," WITH "as claimed in claim 1,".

Claim 21, REPLACE "as claimed in claim 2," WITH "as claimed in claim 1,".

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 05/23/2011 was filed after the mailing date of the Non-Final Rejection on 02/23/2011. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

Claims 1, 4-10, 12 and 14-21 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1, the prior art of record does not teach nor suggest, in the claimed combination, an electronic device comprising a microelectromechanical system (MEMS) element, the element comprising first and second electrodes wherein the first electrode has a surface area

larger than that of the second electrode to improve isolation and an intermediate beam with first and second opposing conductive side faces, the first side face facing the first electrode and the second side face facing the second electrode, which beam is movable by application of a driving voltage between said first and second electrodes, wherein the beam is embodied as a third electrode wherein the third electrode is substantially elastic, such as to be attachable with a first surface area at one edge to the second electrode and with a second surface area at an opposite edge to the first electrode, and such that on application of an actuation voltage the ratio of first to second surface area is changeable; and characterized in that: the second electrode and the second conductive side face of the beam form with an intermediate dielectric a first switchable capacitor that is connected in a signal path between an input and an output, and the first electrode and the first side face of the beam form with an intermediate dielectric a second switchable capacitor, that is coupled from the signal path to ground. In particular the prior art of record fails to teach and/or suggest a Mems device with the claimed electrode configuration and method of operation wherein the beam is embodied as a third electrode wherein the third electrode is substantially elastic, such as to be attachable with a first surface area at one edge to the second electrode and with a second surface area at an opposite edge to the first electrode, and such that on application of an actuation voltage the ratio of first to second surface area is changeable; and

Claim 9, the prior art of record does not teach nor suggest, in the claimed combination, an electronic device comprising a passive network which includes thin film components and a microelectromechanical systems (MEMS) element provided on a substrate, the MEMS element comprising first and second electrodes wherein the second electrode is provided with a surface area that is smaller than that of the first electrode, which electrodes are provided in planes that are substantially parallel to the substrate, an intermediate beam being provided between said

first and second electrodes, said intermediate beam having first and second opposing conductive side faces, the first side face facing the first electrode and the second side face facing the second electrode, which beam is movable by application of a driving voltage between said first and second electrodes; wherein the first and second conductive side faces are part of the same electrically conductive layer being a third electrode and wherein a sacrificial layer used in the manufacture of the MEMS element forms a dielectric layer of the thin film components, and the layers of the second and third electrode also define electrodes of the thin film components. In particular the prior art of record fails to teach and/or suggest a Mems device with the claimed electrode configuration and method of operation wherein a sacrificial layer used in the manufacture of the MEMS element forms a dielectric layer of the thin film components, and the layers of the second and third electrode also define electrodes of the thin film components.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
